the 1990s, the number of people who have been employed in the public sector has increased in all countries. The increase has been particularly large in the United States, where the public sector has grown from 10.5% of the total workforce in 1970 to 17.5% in 1995. In the United Kingdom, the public sector has grown from 12.5% of the total workforce in 1970 to 18.5% in 1995. In the Netherlands, the public sector has grown from 15.5% of the total workforce in 1970 to 22.5% in 1995. In the Scandinavian countries, the public sector has grown from 18.5% of the total workforce in 1970 to 25.5% in 1995.

The increase in the public sector has been driven by a number of factors. One of the most important factors is the aging of the population. As the population ages, the need for social security and health care increases. This has led to a large increase in government spending on social security and health care. Another important factor is the increase in government spending on education. This has led to a large increase in government spending on education. A third important factor is the increase in government spending on infrastructure. This has led to a large increase in government spending on infrastructure.

The increase in the public sector has also been driven by a number of other factors. One of these factors is the increase in government spending on research and development. This has led to a large increase in government spending on research and development. Another factor is the increase in government spending on defense. This has led to a large increase in government spending on defense. A third factor is the increase in government spending on social services. This has led to a large increase in government spending on social services.
